

MIGUEL FRANCIS

Maker · Systems Thinker · Operations & Design

Jamaica · Remote collaboration available

miguelfrancis.rw@gmail.com · linkedin.com/in/miguel-francis-27427a169 · migydao.github.io/MiguelDao/ · github.com/MigyDao

PROFESSIONAL PROFILE

Interdisciplinary maker, systems thinker and operations professional with experience across customer experience and quality, fabrication, technical instruction, 3D design, digital systems, farm/property operations and small-business delivery. I work best where physical work, people, information and technology overlap: clarifying messy problems, mapping constraints, building practical systems and improving them from real-world evidence.

CORE CAPABILITIES

Systems & Operations — workflow design, process improvement, project coordination, requirements clarification, documentation, Notion systems, equipment and maintenance systems, operational troubleshooting.

Design & Making — fabrication planning, furniture and workshop systems, SketchUp, Tinkercad, prototyping, materials reasoning, repair and practical implementation.

Customer Experience & Quality — interaction review, quality analysis, pattern recognition, coaching, feedback systems, frontline support and service-process improvement.

Digital & AI-Enabled Work — AI-assisted research and implementation, product definition, information architecture, local-first software projects, knowledge systems and documentation.

PROFESSIONAL EXPERIENCE

A Likkle More Eco — Operations Manager | Jamaica / Remote | 2025–Present

- Coordinate operating systems, project structure and practical execution across a sustainability-focused maker business.
- Support remote design and production-planning services for makers, contractors and design-oriented clients.
- Develop workflows, documentation and internal systems intended to make work easier to coordinate, maintain and improve.
- Contribute to service development, outreach, research and practical product/project planning.

Farm Operations / Caretaker | Jamaica | 2024–2026

- Coordinated livestock care, land management, property operations, maintenance and practical infrastructure in a resource-constrained working environment.
- Managed changing priorities across animals, vegetation, equipment, repairs, security, household needs and improvement projects.
- Applied low-cost, maintainable approaches to growing, forage, propagation, access, repair and resilience work.

STEAMHouse Innovation Lab — Instructor / Lab Technician | Kingston, Jamaica | 2024

- Supported project-based learning involving 3D printing, laser cutting, electronics, digital fabrication and hands-on problem solving.
- Guided learners through tools, equipment and practical project work while supporting lab readiness, troubleshooting and organization.

I Want To Make (IWTM) — Operations Manager | Jamaica | 2023–2025

- Coordinated enquiry, clarification, quoting, procurement, production, customer communication, delivery and project closeout for custom fabrication work.
- Translated customer requirements into practical furniture, cabinetry, storage and interior-build solutions.
- Managed material sourcing, project information and workflow coordination around physical fabrication and installation.

ibex — Quality Analyst | Jamaica | 2019–2020

- Reviewed customer interactions against quality expectations and identified recurring service patterns, risks and improvement opportunities.
- Turned observations into usable feedback and coaching support for frontline teams.
- Supported new hires, floor operations and unusual or escalated customer situations.

Hinduja Global Solutions — Quality Analyst / Trainer / Subject Matter Expert / Customer Service Advocate | Jamaica | 2016–2018

- Progressed through frontline service, subject-matter support, training and quality-assurance responsibilities.
- Evaluated interactions, coached representatives, supported new-hire learning and helped teams interpret client processes and standards.

Earlier customer-facing experience includes First Global Bank and Alorica.

SELECTED PROJECT & SYSTEM WORK

Character Log — Local-First Desktop Product

Defined product scope, information architecture, data model and acceptance criteria for a local-first desktop application, then directed AI-assisted implementation using Tauri, HTML/CSS/JavaScript and SQLite. A Windows beta candidate has been built; wider platform validation remains a separate release gate.

Equipment Management System — Notion / Workshop Operations

Designed a linked system connecting durable equipment records with maintenance and repair history, parts and consumables, project work and operating decisions. The system is designed around repairability, history and long-term capability rather than inventory counting alone.

3D Design & Fabrication Planning

Developed a remote design workflow using measurements, reference media, SketchUp modelling, review and iterative refinement to make layout, dimensions and build intent easier to communicate.

Modular Platform Bed — Design & Fabrication

Carried a custom physical build through fabrication planning, procurement, modular construction, client-requested adaptation, transport and on-site installation.

EDUCATION & CERTIFICATIONS

University of Technology, Jamaica — Computer Science, 2 years completed; minor in Information Technology

Portmore Community College — Certificate in Computer Repairs

Climate Action & Leadership for Development — Certificate, OAS / Trust for the Americas

TOOLS & PRACTICAL SKILLS

Notion · SketchUp · Tinkercad · Google Workspace · Microsoft Office / Excel · Git / GitHub ·

HTML/CSS/JavaScript · Tauri / SQLite project work · woodworking and cabinetry · digital fabrication · 3D printing

· equipment troubleshooting · computer hardware repair · basic electronics repair · gardening and cultivation ·

animal husbandry · technical documentation
